

Manual for MakeOnlineShop (MOS):

Installation:

Please follow the steps below for the installation:

1. Download the .zip package and unzip it.
2. Using ftp or other program put the files to your web directory.
3. Using web browser bring up the install directory. If your web site is www.example.com and then type www.example.com/install.
4. Then follow the steps from there.

Note: Delete or rename the install directory after finishing your installation.

Admin Access:

To access the admin area you need to type mos after your web site address, if you have installed it under root directory. Like www.example.com/mos

Please change those configurations before you put your shop live:

Web Configuration:

Companyinfo: Add your company information here.

Mailconfig: Your email set up for your web site. If your website using SMTP server to send out the email please add the SMTP setup here.

Register: setup user registration option here.

Paypal: If you receiving the payment using paypal you add your paypal account setup here.

Accounting: If you receive the direct deposit on your bank account you can add it here. Also what is the percentage of tax on the purchase.

Addones: some extra features. Currently we have show world time. It only support on PHP 5+.

Controluser: set up for the user sessions and admin session time out. Also if you want to keep the user login track.

Upload your company logo using FTP or other program on to **"/assets/template/default/images/"** with the name of **MOSlogo.gif**. It will not read any other name.

Main:

You add product on under this, including manage orders and adding new page and email template.

Change Home page template:

To change home page content please use the following format. Click on "**Update Home Page**" on admin site. You will see some default template over there. You need to follow the format below to display your home page correctly.

Each paragraph start with "%%%P%%%" and end with new line of "%%%%%%". You can add the html code on your text. Example:

```
%%P%%  
This is the body.  
%%%
```

IMAGE:

If you wan to add Image it has to be start with "%%%IMG%%%" and end with new line if "%%%%%%", in the middle you need add the image location.

Example:

```
%%IMG%%  
/assets/images/image.gif  
%%%
```

Change Email Template:

Changing the email template is important. Select "**edit email template**" and from the drop down list select the template you want to edit.

You can edit all the text on the template, but do not change the following variable names:

- full_name – user full name.
- account_no – this is the account number of user
- user_id – this is the user id of user (like john_citizen)
- pass_word – Password of user.
- transaction_id – this the order number of customer purchase
- total_amount – total amount on the order
- total_tax – total tax on the order
- discount_given – if any discount given.

- `shoping_list` – this will add the shopping item list on order.
- `diposit_amount` – this is for the amount of credit you add to the customer.
- `user_ip` – client ip for tracking purpose.
